What is Paribarton?

Paribarton is a fully integrated e-commerce and admin management platform built to streamline product distribution, inventory tracking, and order management. It delivers a smooth experience for both administrators and end customers through a clean, responsive interface backed by a powerful PHP/MySQL stack.

Platform Highlights

Multi-Role Access Control

Distinct panels for Super Admin and Admin users, each with carefully scoped permissions to maintain security and operational clarity.

Real-Time Dashboard

Live metrics including revenue tracking, GST breakdowns, commission splits, and monthly expense summaries — all in one glance.

Seamless Product Management

Full lifecycle management from adding and editing products to assigning them to store inventory — with bulk CSV upload support.

Customer-Facing Website

A responsive user-facing frontend with AJAX-powered browsing, multi-product selection, and secure session-based login.

Super Admin Panel

The Super Admin is the system's highest authority with complete control over all platform operations.

Dashboard

Real-time overview of daily revenue (bar chart), monthly summary (donut chart), pricing with/without GST, and breakdowns for commission, owner, customer, marketing, and investor shares.

Category & Sub-Category Management

Full create, edit, and delete access for all product categories and their sub-categories. Enables clean hierarchical product classification.

Product & Store Product Management

Add detailed product listings with images and validation. Assign products to store inventory with pricing and quantity. Bulk upload via CSV with error preview.

Buy Product & Order History

Direct purchase interface with live GST and commission calculation. Full order history with search and filter tools.

Admin & User Management

Create new admin accounts with granular permission control. Register and manage customer profiles with full edit and delete access.

Admin Panel

The Admin Panel mirrors the Super Admin experience but with intentional access restrictions — ensuring operational assistants can contribute without compromising system integrity.

Module	Super Admin	Admin
Dashboard	Full Access	Full Access
Category Management	Full CRUD	View & Add Only
Sub Category Management	Full CRUD	View & Add Only
Product Management	Full CRUD	Add & View Only
Store Product Management	Full CRUD + CSV	Add/View/CSV Only
Buy Product	Full Access	Buy & View Calc.

Order History	Full Access	Full Access
Admin Management	Full Access	Not Available
User Management	Full CRUD	Add & View Only

Customer Website (Frontend)

The customer-facing website is designed for ease of use — allowing users to browse products, register/login, and place orders smoothly on any device.

Smart Registration & Login

AJAX-powered phone number validation: instantly shows a green tick if registered, or prompts a popup registration form for new users.

Dynamic Product Browsing

Products load live from the database with name, size, price, availability status, and multi-select checkboxes for batch orders.

Technology Stack

Backend

PHP (PDO) with MySQL — prepared statements throughout for SQL injection prevention. Session-based authentication and access control.

Frontend

HTML5, CSS3, Bootstrap with pure JavaScript and AJAX — no jQuery dependency. MDI Icon Library. Fully responsive and mobile-friendly.

Security & Quality

- SQL injection prevention via PDO prepared statements
- Session-based access control across all panels
- Input sanitization and form validation on all endpoints
- AJAX-driven operations for seamless, uninterrupted UX
- Dynamic dropdowns with auto-validation
- 100% tested and deployed in live/staging environment

What is the Nuapada VDMS?

The Nuapada Voter Data Management System (VDMS) is a centralized digital governance platform designed to collect, organize, and analyze citizen information across a district. Built for government offices, administrative staff, and campaign management teams, it bridges the gap between communities and the welfare schemes designed to serve them.

Why It Matters

Centralized Citizen Registry

A single source of truth for citizen demographics, scheme eligibility, bank details, and socioeconomic data — eliminating fragmented record-keeping.

Scheme Beneficiary Tracking

Track who benefits from Ration Cards, PM Kisan, PM Awas Yojana, Pension Schemes, Disability Certificates, and more — with full audit trails.

Geographic Intelligence

5-level hierarchy (District → Block → Zone → Panchayat → Village) enables location-based analytics and precise data classification.

Grievance Resolution

Citizens' complaints and service requests are logged with reference numbers and scheme categories for accountable follow-up by administrators.

Core System Modules

Dashboard

A centralized command view showing total citizen registrations, group memberships, scheme-wise distribution, block-wise analytics, and quick-access shortcuts to all key modules.

Location Management

A 5-tier geographic hierarchy (District → Block → Zone → Panchayat → Village) that forms the backbone of all data classification. Administrators can add, edit, and delete entries at every level, enabling granular location-based reporting.

Citizen Registration (Add / View Member)

The core citizen database. Each record captures personal information, identification details, address, scheme eligibility, socioeconomic data, and bank account details. Search and filter by name, mobile number, or location — then edit or delete as needed.

Yojana (Welfare Scheme) Management

Tracks government schemes at a category level. Supported schemes include Ration Card, PM Kisan, CM Kisan, PM Awas Yojana, Pension Scheme, Disability Certificate, Income Certificate, and Caste Certificate. Administrators can add or retire scheme categories at any time.

Group / Community Management

Register members belonging to volunteer teams, local committees, clubs, and campaign groups. Filter, manage, and report on group membership with full edit capabilities.

Grievance Management

Log and track citizen complaints with reference numbers, location data, and scheme category context. Provides administrators a structured workflow for addressing public service issues.

Banner & Event Management

Upload and manage promotional banners for campaigns and government initiatives. Record public events with images, descriptions, and status tracking — supporting community engagement and outreach.

Reporting & Data Export

The system supports data export for reporting and analytics across all major data categories.

Export Formats

Reports can be exported in Excel (.xlsx), CSV, and PDF formats — compatible with standard government reporting workflows.

Report Dimensions

Generate filtered reports by location (block/zone/village), welfare scheme category, or group membership for targeted analytics.

Key Benefits

- Eliminates fragmented, paper-based citizen records
- Enables precise welfare scheme monitoring and beneficiary tracking
- Supports data-driven administrative decision-making
- Improves transparency and accountability in public service delivery
- Location hierarchy allows block-level and panchayat-level insights
- Community group data supports volunteer coordination and outreach
- Grievance tracking ensures citizen complaints don't go unaddressed

Ready to Build Something Impactful?

Both platforms are fully tested, deployed, and ready to scale. Whether you need an e-commerce backbone or a civic data solution, we deliver precision-engineered software that works.
